Experiences

IT Operations & Digital Commerce Specialist ETB TECH SOLUTIONS LTD · Part-time	Oct 2024 - Present Nairobi
- Managed and optimized end-to-end digital infrastructure, including web hosting, domains, and server environments, enhancing system reliability and uptime by 99.7% while implementing robust backup & security controls. - Engineered, developed, and maintained high-performance eCommerce websites, launching innovative features and improving user experience across desktop/mobile to boost engagement and support digital commerce growth. - Administered Cloudflare services (DNS, SSL, CDN, WAF) to significantly enhance website performance, reduce latency and fortify security posture against cyber threats - Led technical SEO strategies, conducting comprehensive website audits and optimizing architecture via Google Search Console, which improved organic search visibility and keyword rankings - Planned, executed, and optimized Google Ads campaigns, leveraging keyword research and audience targeting to generate higher CTRs and improve conversion rates by within defined budget parameters. - Configured and managed Google Analytics, Google Merchant Center, and Google Business Profile, providing critical insights into customer behavior and supporting data-driven strategic decisions for eCommerce growth.	
Flutter Developer Solfa Solve & Flourish Africa	Oct 2025 - Mar 2026 Nairobi
- Engineered and deployed core mobile application components (Flutter), ensuring mobile-optimized performance and an intuitive user experience for 500+ initial users. - Integrated robust backend APIs for critical features (product listing, search, authentication, payments), ensuring reliable transaction processing for over 100 daily operations and seamless data flow. - Collaborated cross-functionally to define scalable architecture and API integration patterns, foundational for future platform expansion and reducing potential integration issues by 30%.	
Information Technology Support Officer Ministry Of Education	Mar 2025 - Mar 2026 Nairobi
- Directed end-to-end ICT operations for the Ruiru Sub-County Education Office and 50+ public schools, ensuring continuous availability of critical administrative and learning systems. - Provided advanced troubleshooting and resolution for hardware, software, and networking incidents, reducing system downtime by an estimated 20% and resolving approximately 15 technical support tickets weekly. - Designed, installed, and maintained LAN networks, internet connectivity, and vital ICT infrastructure including over 100 computers and CCTV systems, ensuring secure and reliable campus-wide access. - Administered and supported national education systems (NEMIS, KEMIS, KNEC portals), upholding data accuracy and system availability for thousands of users across the sub-county.	
Software Engineer DigiSoft Consulting Services Ltd	Nov 2023 - Jan 2025 Nairobi, Kenya
- Designed and implemented an Android POS application, expertly collecting data on over 1,000 daily sales transactions, inventory movements, and customer details, enhancing reporting accuracy by 25%. - Engineered secure token authentication and API data validation, bolstering sensitive customer data protection and ensuring data integrity for 50+ users. - Optimized system architecture through robust design principles, accelerating data processing by 15% for crucial reports and improving data retrieval efficiency. - Automated the generation of daily sales, payment, and inventory reports, empowering teams to identify performance gaps and improving stock management by 10%.	
Software Developer Smart Ryuga Company	Jan 2023 - Sept 2023 Nairobi, Kenya
- Designed a system that handled the flow of over 50,000 data records each day, which made it easier for teams to use data. - Looked after both SQL and NoSQL databases, processing about 1,000 data requests per hour to provide quick access to very important information. - Implemented robust data connectivity plans, maintaining 99.5% data accuracy and reliability across 5 disparate system components, minimizing data discrepancies. - Automated deployment pipelines for new data tools, accelerating system updates by 30% and significantly improving the overall stability and operational smoothness of data systems.	

- Made web applications that used PostgreSQL to store client data, helping teams answer complex questions and find key project details for reports.
- Built a client tracking system to monitor over 500 different client interactions, which made it much easier for staff to review project progress.
- Improved how users input information based on their feedback, making them 15% happier and helping them get tasks done much more efficiently.
